

Hemakshi Chitte

(607) 232-3291 | hemakshi.chitte@yahoo.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack engineer with 3+ years of experience building and shipping production web applications, focused on React and TypeScript. Comfortable owning features end to end: understanding user requirements, designing the right change, and shipping in small, well-tested increments. Strong in backend APIs and third-party integrations.

EDUCATION

Binghamton University, State University of New York
Master of Science in Computer Science

Binghamton, NY
Aug 2023 - Dec 2025

TECHNICAL SKILLS

Programming Languages: JavaScript(ES6+), TypeScript, Python, C, Java
Frontend: React.js, Next.js, Redux, Zustand, Tailwind CSS, HTML5, CSS3, GraphQL
Backend: Node.js, Express.js, REST APIs, Webhooks, PostgreSQL, Supabase, MongoDB, MySQL, Docker, CI/CD
AI Development: Claude Code (MCP, skills, subagents), Model Context Protocol, LangChain, LangGraph, vLLM
Cloud & Tools: GCP, Firebase, GitHub/GitHub Actions, Playwright, Webpack

PROFESSIONAL EXPERIENCE

- Software Engineer** Mar 2026 – Jul 2026
Runara AI Remote
- Benchmarked competing LLM inference frameworks across GPU hardware configurations, analyzing throughput and latency tradeoffs to inform production deployment decisions and hardware selection
 - Built and evaluated LangGraph pipelines for inference optimization, contributing to architecture decisions around speculative decoding and query rewriting, with Claude Code in the daily build-and-test workflow
 - Configured and deployed LLM workloads across cloud GPU environments (Vast.ai, GCP), managing containerized inference servers and troubleshooting hardware compatibility at the CUDA kernel level
 - Collaborated with cross-functional engineering teams to translate real-world infrastructure challenges into scalable AI pipeline solutions, contributing across the full cycle from design to deployment
- Full Stack Engineer** Aug 2025 – Feb 2026
Atlasly New York, NY
- Rebuilt the frontend in React 18 + TypeScript, reorganizing the component structure and state management across a multi-step app; used Claude Code to plan changes and ship them in small, reviewed commits
 - Connected several third-party data APIs into one consistent frontend layer, with graceful fallbacks that kept the app fully usable even when an upstream source was slow, inconsistent, or unavailable
 - Used Supabase (Auth, Realtime, Edge Functions) to keep the UI in sync with backend updates through multi-step transactions, making sure each user only ever sees their own account's data
 - Added client-side caching to avoid repeated API calls on the same lookups, plus consistent loading, empty, and error states so users always get clear feedback during data fetches and failures
 - Worked with stakeholders to scope features; kept changes small and easy to review and roll back
- Software Developer** Jul 2021 – Jul 2023
Xoriant Pvt.Ltd Pune, India
- Built and maintained a React + TypeScript app that pulled data from multiple backend services through REST and GraphQL APIs, serving consistent payloads to both web and mobile clients
 - Designed GraphQL schemas and resolvers combining data across services into a single client call
 - Created a reusable component library across 10+ shared modules with Redux for state management, enabling faster iteration while cutting code duplication by 30% and production bugs by 15%
 - Built Node.js backend services with RESTful and GraphQL endpoints supporting high-volume, multi-user workloads; designed and tuned PostgreSQL and MySQL schemas and complex queries for reliable data exchange at scale
 - Set up CI/CD pipelines with Jenkins, Docker, and GitHub Actions, cutting deployment time by 35% and bugs by 20%

PROJECT EXPERIENCE

- MCP Engineering Ops** | *Python, Model Context Protocol, FastMCP, Google Gemini, SQLite* Feb 2025 – Apr 2025
- Built an engineering ops assistant where an LLM reads a plain-English request, then picks and calls the right tool from 10 registered MCP tools at runtime to manage tickets and team assignments
 - Wrote the FastMCP server with Pydantic-validated inputs, SQLite storage, and an audit log of every write
- FinQA RAG Chatbot** | *Python, LangGraph, LangChain, OpenAI, FAISS, vLLM* Jan 2025 – Present
- Built a RAG pipeline that answers numeric questions from financial documents, retrying with a rewritten query when retrieval looks weak so the model doesn't make up numbers
 - Evaluated on the FinQA benchmark; made the LLM provider swappable between OpenAI and self-hosted vLLM
